CAST IRON BOILERS

## 19HE SERIES

Smith 19HE Series cast iron, pressurized, wet-base boiler/burner units are ideal for light commercial water or steam heating systems utilizing No. 2 fuel oil, natural gas, or combination gas/oil. Ten different sizes are available, ranging from 308 MBH to 1750 MBH. Series 19HE boilers are available in three ways — knocked down, assembled sections, or completely packaged units. All sections are tested and approved for 80 psi working pressure as standard equipment.

### Designed and Constructed for Easy Service and Long Life.

19HE Series boiler/burner units are designed and constructed for easy service. A front observation port allows technicians to visually check the flame and combustion area. Easy-to-remove, side-mounted cover plates make boiler clean-out quick and easy. Side-mounted tankless 9 GPM coils allow for easy visual inspection and service. Heavy-duty, hydrocarbon-resistant Viton port seal gaskets are exceptionally easy to install. The integral, cast-iron, fail-safe breeching damper may be easily adjusted and securely locked in position. Individual section draw rods simplify assembly while reducing stress.

*All sizes exceed the Ashrae 90.1 efficiency requirements*

### Reliable, Fuel-Efficient Heat

Smith 19HE Series boiler/burner units are designed and constructed for high efficiency and superior performance. High-quality cast iron sections, cast-in heat extraction pins, completely insulated metal jacket, ceramic fiber rope section seals, obround-shaped upper ports, and carefully selected, high-efficiency burner add up to a boiler/burner unit that will provide reliable, fuel-efficient heat for years to come. Compare Smith 19HE Series units with other brands with similar capacities — you'll discover that Smith is your smartest choice.

The manufacturer should be consulted before selecting a boiler for installations having unusual piping and pickup requirements, such as intermittent system operation, extensive piping, etc.

For forced hot water heating systems where the boiler and all the piping are within the area to be heated, the boiler may be selected on the basis of its Gross Output.

+ 11 and 12 section requires 12" diameter vent pipe. Transition collar provided by Smith.

**NOTE: Dimensions are approximate. Should not be used to "rough-in" equipment.**
